# ARBORIST REPORT

The scope of the assignment is to identify tree species, measure tree diameters and evaluate the trees at this address. I will also include trees off site within 20' of this site to the best of my ability. The second part of the assignment is to see what issues building a structure might pose with regards to the on and off site trees. All evaluations are visual from the ground. Show all trees with in 20' of this parcel. **Trees cannot be removed without an approved permit unless otherwise noted.**

**Tags with identifying numbers were attached to the trees except for the Palms and Punk tree and right of way trees. Two of the trees #375 and #385 are in extremely poor condition. They meet the intent of HR-1159 dangerous tree. I strongly suggest you remove them as soon as possible. You will not need a permit or replacements for these two only.**

# 385

# 375

**The remaining trees are in poor to fair condition except for Tree #366 which is a Live oak in good condition and should be saved. The trees rated as poor should be removed as part of the building plan and those in fair condition could be removed depending on the site plan.**
