Dear Mr. Weir:

The Tanks Section of the Hazardous Waste Program has received and reviewed the report on the off-site assessment activities submitted on June 30, 1999, for the site referenced above. We were pleased to observe that no petroleum contamination was detected in any of the soil samples collected.

Based upon a review of the analytical data and other information submitted, the department finds that no additional investigation or remedial action is currently required with regard to these petroleum substances. However, the department's finding is based solely on the information contained in these reports, and this finding does not constitute a certification or guarantee of the quality of the remedial action conducted or with regard to the lack of contamination on the property.

In the event a future petroleum-related environmental problem arises in the vicinity of this property, the department reserves the right to require responsible parties to conduct additional investigation and/or remedial actions.

If you have any questions regarding this letter, or technical aspects of the work, you may contact Ms. Valerie Garrett of my staff at (573) 751-6822.

Sincerely,

HAZARDOUS WASTE PROGRAM

Julie Pearson for
Jim Gowney, Chief
Remediation Unit
