

Working No. 11457  
 Underwriting Building - 1st Flr.  
 1. This is a structural plan for the first floor of the Underwriting Building, showing the layout of the main office space, including the reception area, conference rooms, and private offices. The plan is based on the architectural drawings provided and is subject to change without notice. The structural engineer is responsible for the design and construction of the steel frame, including the columns, beams, and floor slabs. The plan is to be used in conjunction with the architectural drawings and the specifications for the building. The structural engineer is not responsible for the design of the mechanical, electrical, or plumbing systems, or for the design of the interior finishes. The structural engineer is also not responsible for the design of the exterior cladding or the landscaping. The structural engineer is responsible for the design and construction of the steel frame, including the columns, beams, and floor slabs. The plan is to be used in conjunction with the architectural drawings and the specifications for the building. The structural engineer is not responsible for the design of the mechanical, electrical, or plumbing systems, or for the design of the interior finishes. The structural engineer is also not responsible for the design of the exterior cladding or the landscaping.
