We maintain multiple, 100% dual-path, gigabit fiber optic data access facilities from three independent providers:

AT&T
Charter Spectrum
WOW!

Conference America maintains two, - 48 volt DC powered central plants for a complete, redundant, industrial grade power solution.

In addition to our DC power plants, our entire facility is backed-up by two stand-alone 150KW diesel generators to protect against any external power outages.

Both generators are professionally serviced by Cummins Mid-South bi-annually and exercised with load weekly.
